finishing my dissertation

The image is a composite of three screens. On the left, a smartphone displays a music player with a track list. The tracks include "Combustive" by Arto Lindsay from the album "Salt", "Make that sound" by Arto Lindsay from "Salt", "Salt" by Arto Lindsay from "Salt", "Sundown" by Barn Owl from "Ancestral Star", "Visions in Dust" by Barn Owl from "Ancestral Star", "Night's Shroud" by Barn Owl from "Ancestral Star", "Ancestral Star" by Barn Owl from "Ancestral Star", "Cavern Hymn" by Barn Owl from "Ancestral Star", "Flatlands" by Barn Owl from "Ancestral Star", "Twilight" by Barn Owl from "Ancestral Star", "Awakening" by Barn Owl from "Ancestral Star", "Incantation" by Barn Owl from "Ancestral Star", "Light From the Mesa" by Barn Owl from "Ancestral Star", "Pass the Mic" by Beastie Boys from "Check Your Head", "Stand Together" by Beastie Boys from "Check Your Head", "Professor Booty" by Beastie Boys from "Check Your Head", "E-Pro" by Beck from "Guero", "Que Onda Guero" by Beck from "Guero", "Girl" by Beck from "Guero", "Missing" by Beck from "Guero", "Black Tambourine" by Beck from "Guero", "Earthquake Weather" by Beck from "Guero", and "Hell Yeah" by Beck from "Guero". The phone also shows a BPM of 133. In the center, a computer screen shows the Shazam interface with a track list titled "Tag Result". The results include "Nautilus" by Mantronix, "Bassline" by Mantronix, "Sea Song" by Robert Wyatt, "Liquid Swords" by GZA/Genius, "Miami Vice Theme - Miami Vice/Soundtrack" by Jan Hammer, "Paid In Full" by Eric B. & Rakim, and "Octopus" by Syd Barrett. On the right, a large blue circular graphic features the Shazam logo.

Track #	Name	Time	Artist	Album
8	Combustive	4:56	Arto Lindsay	Salt
9	Make that sound	3:56	Arto Lindsay	Salt
10 of 10	Salt	4:00	Arto Lindsay	Salt
1	Sundown	2:27	Barn Owl	Ancestral Star
2	Visions in Dust	4:01	Barn Owl	Ancestral Star
3	Night's Shroud	2:15	Barn Owl	Ancestral Star
4	Ancestral Star	10:01	Barn Owl	Ancestral Star
5	Cavern Hymn	1:59	Barn Owl	Ancestral Star
6	Flatlands	6:17	Barn Owl	Ancestral Star
7	Twilight	2:36	Barn Owl	Ancestral Star
8	Awakening	2:54	Barn Owl	Ancestral Star
9	Incantation	1:58	Barn Owl	Ancestral Star
10	Light From the Mesa	6:43	Barn Owl	Ancestral Star
3	Pass the Mic	4:17	Beastie Boys	Check Your Head
12	Stand Together	2:47	Beastie Boys	Check Your Head
18	Professor Booty	4:13	Beastie Boys	Check Your Head
1 of 13	E-Pro	3:28	Beck	Guero
2 of 13	Que Onda Guero	3:45	Beck	Guero
3 of 13	Girl	3:54	Beck	Guero
4 of 13	Missing	4:58	Beck	Guero
5 of 13	Black Tambourine	2:52	Beck	Guero
6 of 13	Earthquake Weather	4:37	Beck	Guero
7 of 13	Hell Yeah	3:29	Beck	Guero
		4:26	Beck	Guero
		7:01	Beck	Guero

Keith Fullerton Whitman
Playthroughs
[Kranky; 2002]
Rating: 9.7

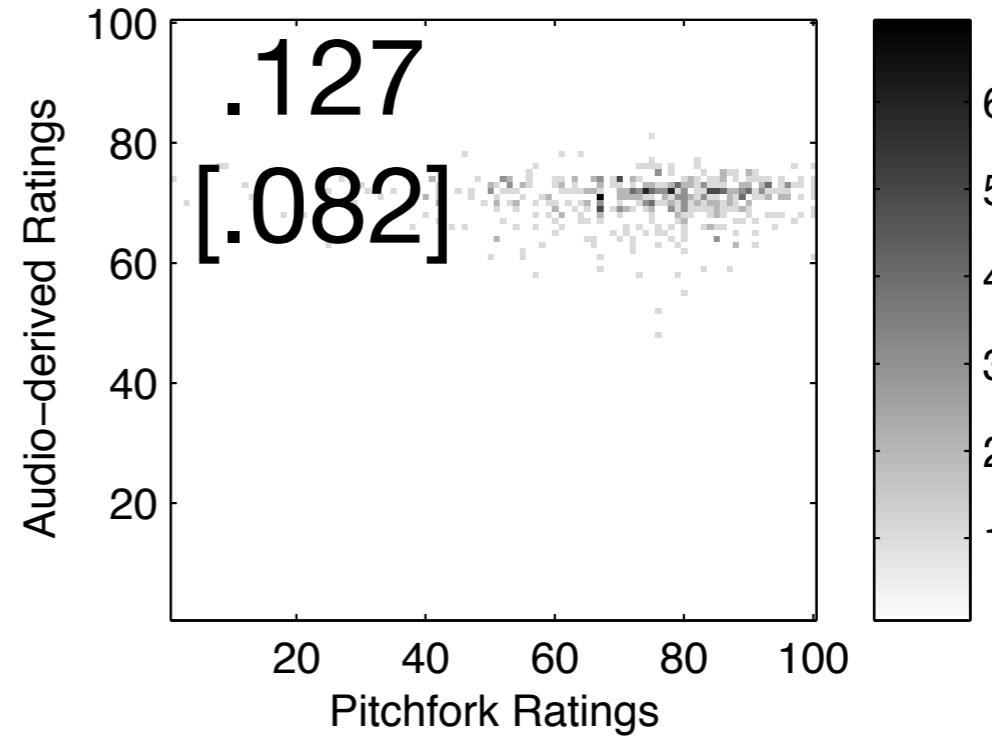

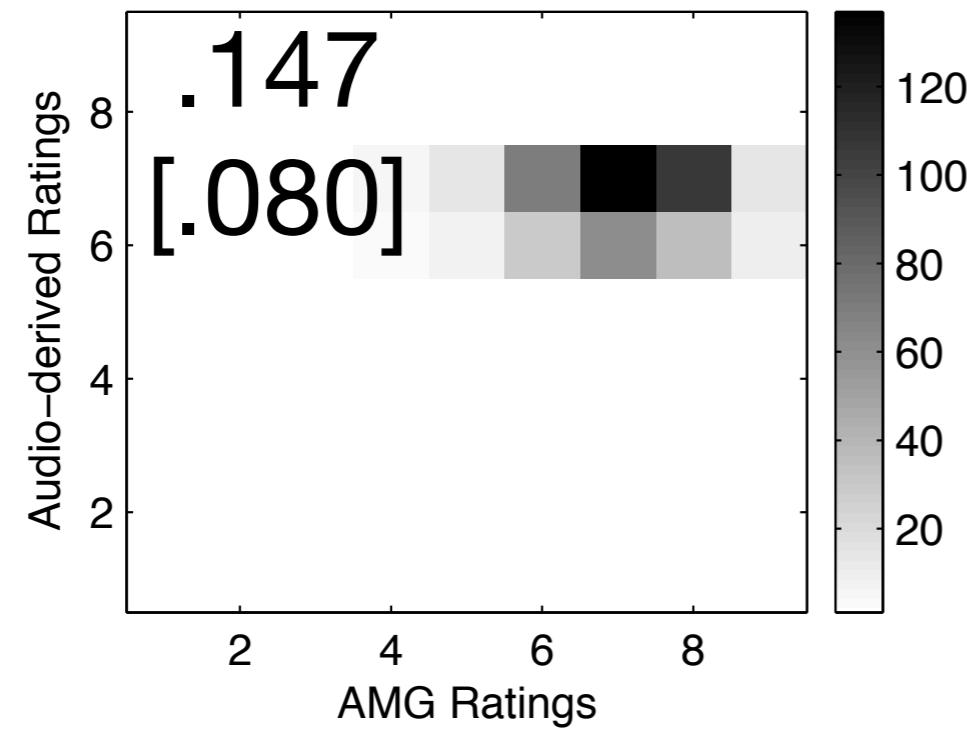

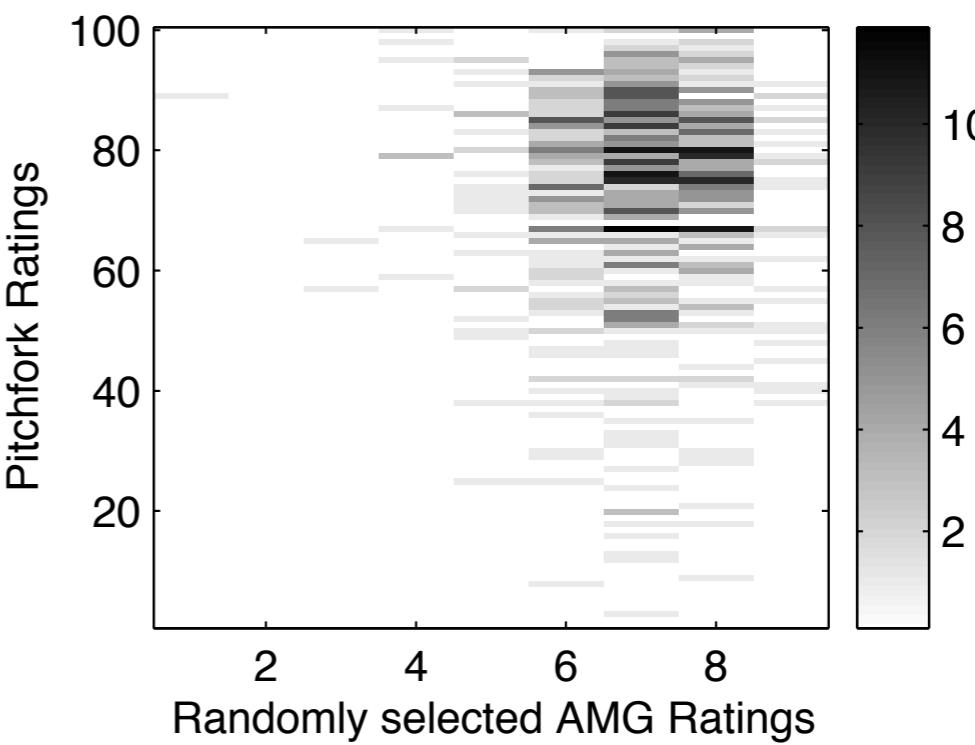

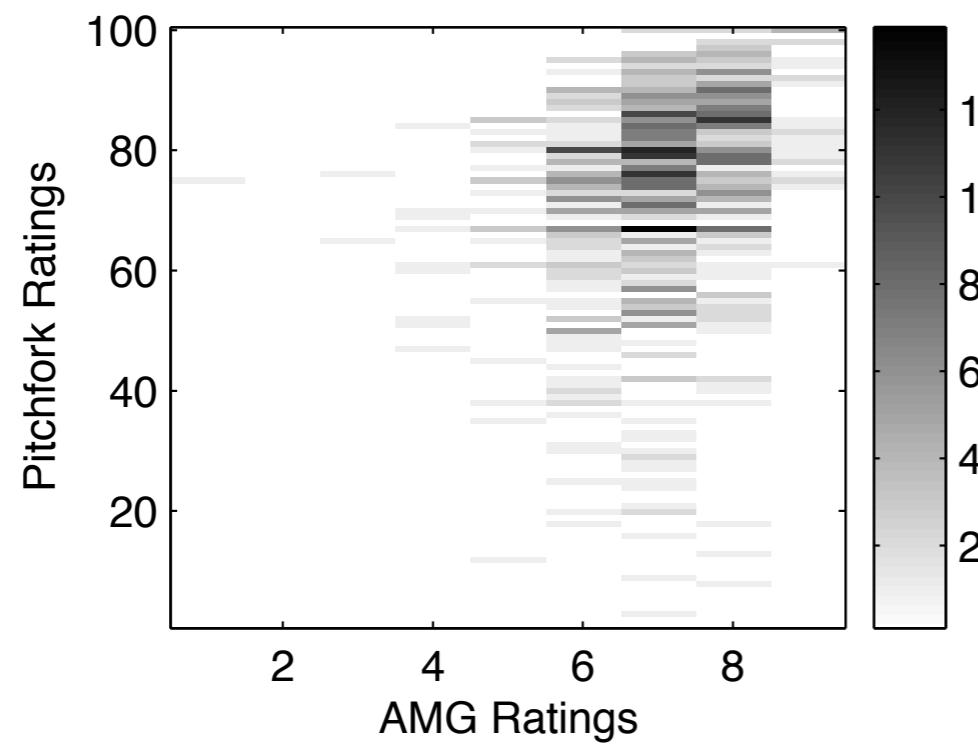

You probably know Keith Fullerton Whitman as breakcore maven Hrvatski, a man who played in a few bands before developing an obsession with Squarepusher and deciding to probe the most hectic beats possible on labels such as Planet μ and his own Reckankreuzung, as well as falling into the Tigerbeat6 orbit. You also may know Hrvatski by his pithy electronic music write-ups for the Forced Exposure website, penned while he worked in sales for the revered distributor. But the Keith Fullerton Whitman of *Playthroughs* has kept a lower profile. Starting last year with the *21:30 for Acoustic Guitar* EP, Whitman began experimenting with subtle music based on laptop-processed guitar tones. While he's tinkered with this approach here and there, *Playthroughs* is his first sustained exploration of quiet sound.

If you've listened to the more drone-focused side of electronic music in the last few years, you've definitely heard the core elements that make up *Playthroughs*. There is no radical breakthrough in texture here, nothing to make you turn your head and say, "What the hell was that?" *Playthroughs* consists entirely of processed guitar, but the tones are light on harmonics, with many possessing an almost sine wave-level of clarity. As the thin drones hang in the air and shift this way and that, they harmonize with other drones and find themselves poked with fuzzy implements of static. Nothing terribly earth-shattering about this composition method.

It's true that much of *Playthroughs* seems familiar on the surface, but I don't think it an exaggeration to say that this record essentially perfects this particular style of music. It's an album of meticulous balance, Zen focus, and tiny gestures that carry great force, where each individual piece of sound is carefully placed to maximize impact. The first 3½ minutes of "feedback zwei", for example, consists of overlapping blankets of clean, piercing electronic feedback that remain in constant motion, creating new harmonic patterns with each passing second. And an unexpected cloud of pink noise slowly envelops the sound field, bathing the entire track in a warm digital mist and drastically shifting the perspective.

Metadata features:

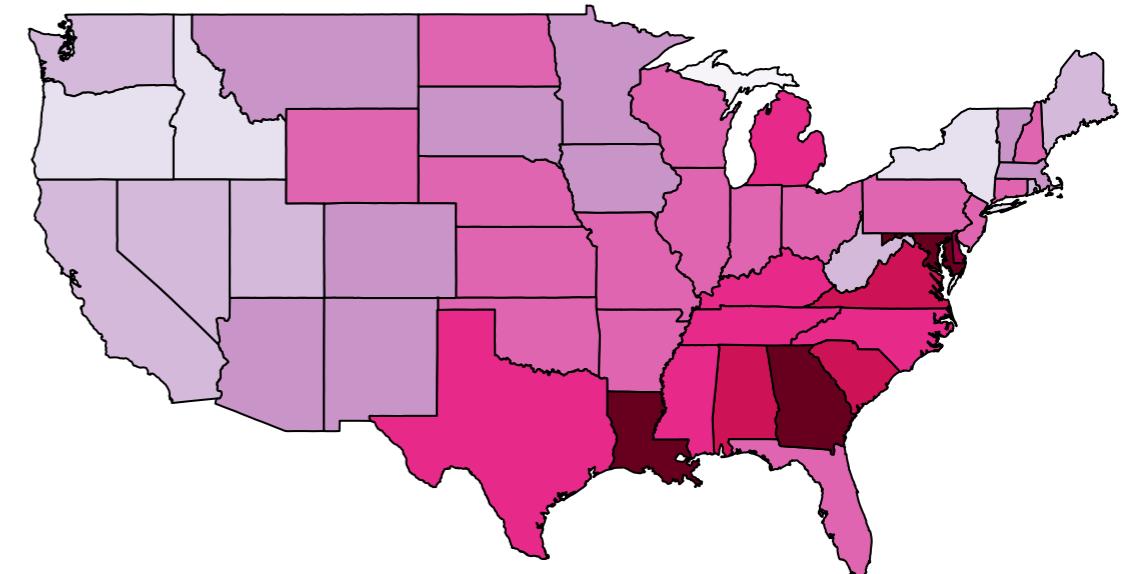

- Explicit categories, tags, similars from partners
- Physical sales data
- Other ontologies

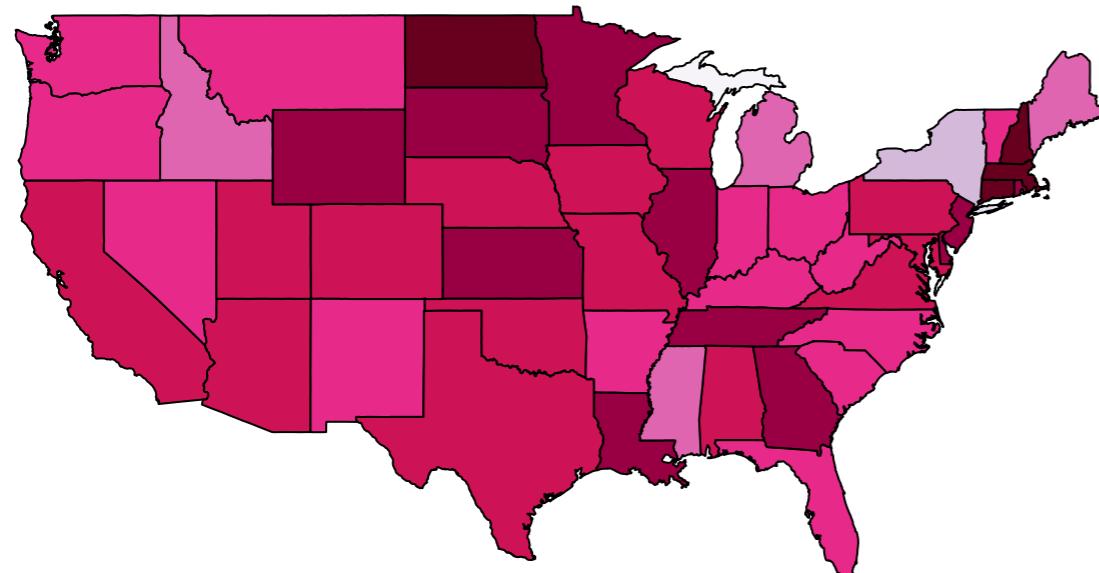

Per capita sales for BON JOVI

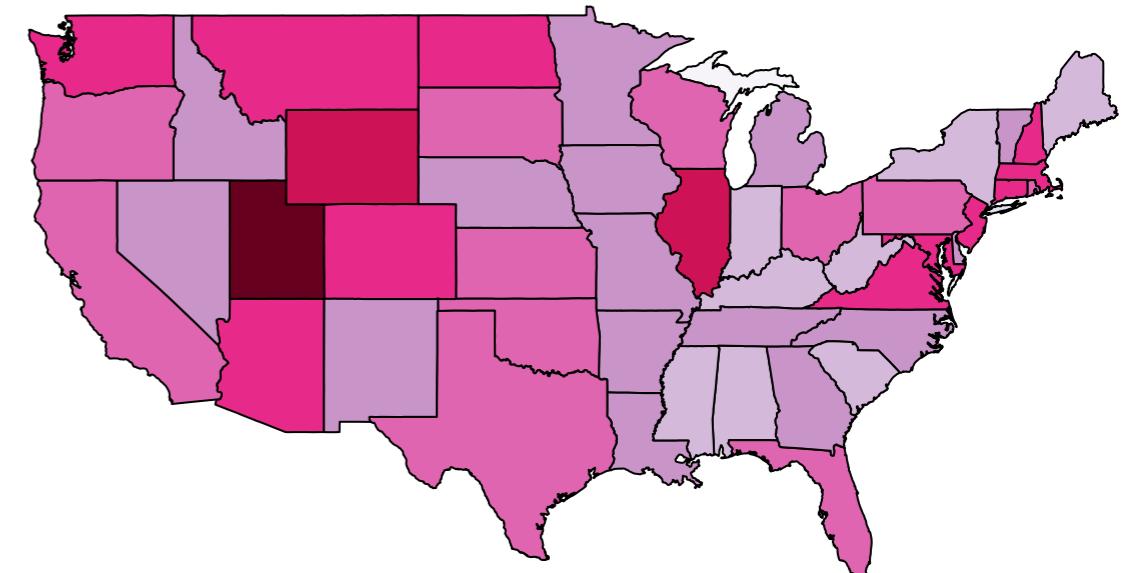

Per capita sales for YOUNG JEEZY

Per capita sales for JUSTIN BIEBER

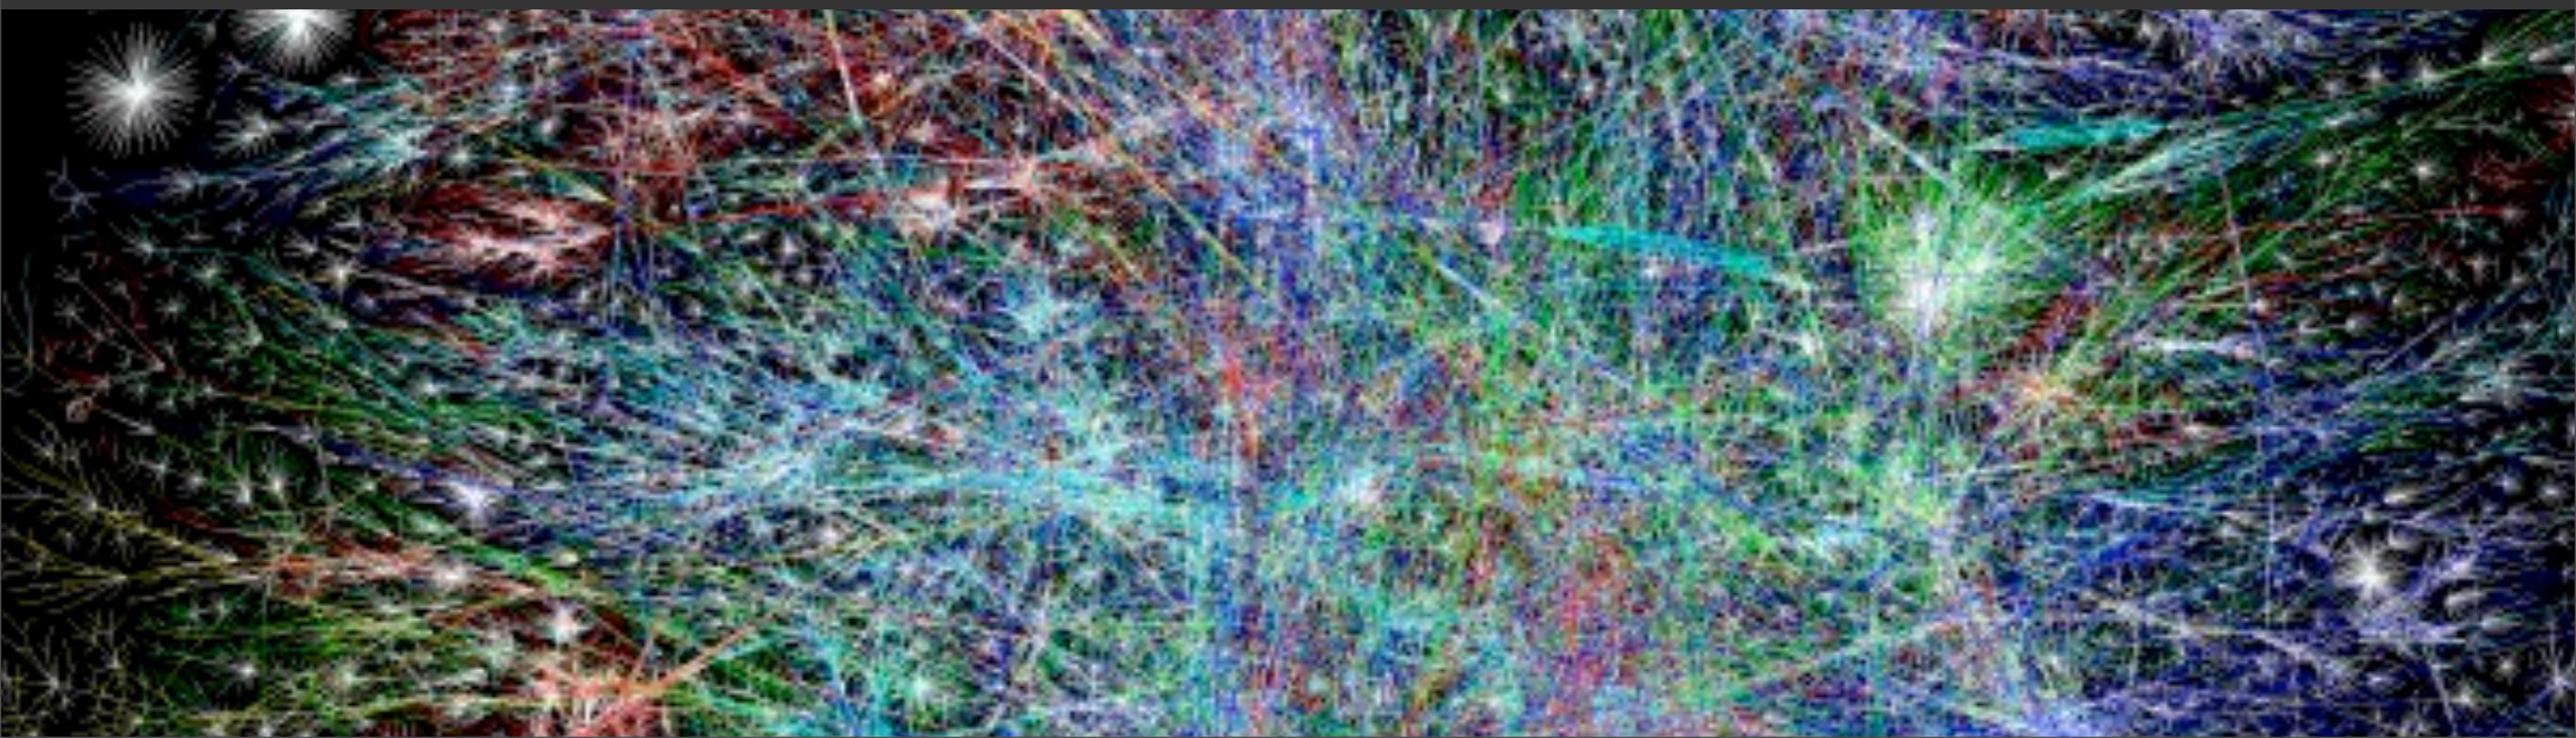

Per capita sales for NEON TREES

Biggest database of artist data ever:

- billions of datapoints about artists
- web crawls: {terms: [(funky,0.34),(jazz:0.95)]}
- metadata: {style:jazz, location:Boston}
- user data: {id:LIX2923ND, likes:[Phonat,Apparat]}
- analytics: {hotttnesss: 0.45, chart_position... etc}

Normalize everything to a “term” in a big index:

- words get indexed w/ their probabilities as TF
- artist names gets resolved to IDs in a graph
- numerical data goes out to a tree or clustered
- optimizes for fast query, distributed is easy

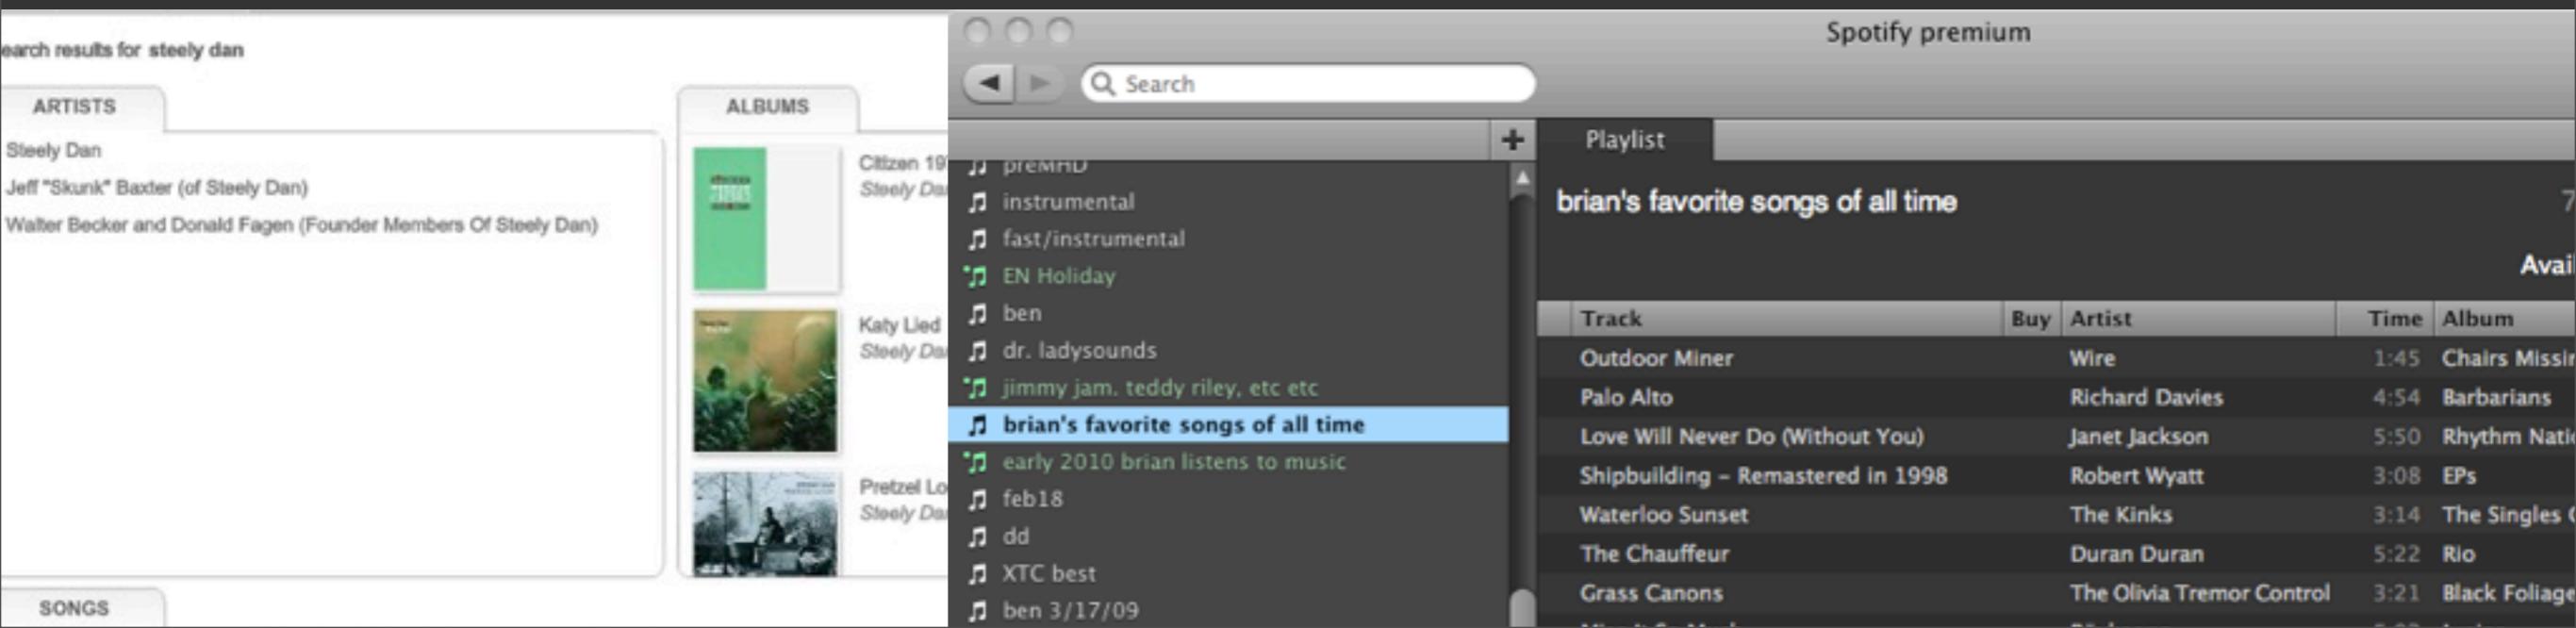

$$style_i \cdot x + genre_i \cdot y + location_i \cdot z + webtext_i \cdot r\dots$$

- “boosts” set in real time per app or trained

“Song to song” similarity

- Catalogs at >10m tracks each (multiple clients!)
- Existing cultural metadata coverage 80% ish
- “Happy birthday to <your name>” × 1,200
- Turn around live API in < week
- Bottlenecks all in infrastructure: disk speed, data storage, DB access / inserts, queues

Merge what we know

- If we have text data, filter on artist similars
- Sort filtered X,000 tracks in memory, cache
- Acoustic features use statistics of EN Analyze
- QA process (interns + spot checks)
- Evaluation is customer feedback

The screenshot shows the Spotify premium interface. At the top, it says "Spotify premium". In the center, there's a search bar with the placeholder "Search". Below the search bar, there are three tabs: "ALBUMS", "PLAYLISTS", and "ARTISTS". The "ARTISTS" tab is selected, showing results for "Steely Dan". The first result is "Steely Dan" with a small profile picture. Below the artist name, there are two additional entries: "Jeff 'Skunk' Baxter (of Steely Dan)" and "Walter Becker and Donald Fagen (Founder Members Of Steely Dan)". To the right of the artist section, there's a list of tracks from a playlist titled "brian's favorite songs of all time". The tracks listed are: "premnu", "instrumental", "fast/instrumental", "EN Holiday", "ben", "dr. ladysounds", "jimmy jam. teddy riley, etc etc", and "brian's favorite songs of all time" (which is highlighted with a blue selection bar). At the bottom of the screen, there's a table showing the details of the tracks in the playlist:

Track	Buy	Artist	Time	Album
Outdoor Miner		Wire	1:45	Chairs Missing
Palo Alto		Richard Davies	4:54	Barbarians
Love Will Never Do (Without You)		Janet Jackson	5:50	Rhythm Nation
Shipbuilding – Remastered in 1998		Robert Wyatt	3:08	EPs
Waterloo Sunset		The Kinks	3:14	The Singles Collection
The Chauffeur		Duran Duran	5:22	Rio
Grass Canons		The Olivia Tremor Control	3:21	Black Foliage

Hardest problem?

- Evaluating distance metrics?
- Selecting audio features?
- Sharding / replicating key-value stores?
- Tuning, QA?

The screenshot shows the Spotify premium interface with the following details:

- Search Bar:** "Search" bar at the top with the text "Spotify premium".
- Artist Section:** "ARTISTS" tab selected. Results for "Steely Dan" include:
 - Steely Dan
 - Jeff "Skunk" Baxter (of Steely Dan)
 - Walter Becker and Donald Fagen (Founder Members Of Steely Dan)
- Album Section:** "ALBUMS" tab selected. Results for "Steely Dan" include:
 - Citizen 19
 - Katy Lied
 - Pretzel Logic
- Search Results:** A list of tracks and playlists.
 - premnu
 - instrumental
 - fast/instrumental
 - EN Holiday
 - ben
 - dr. ladysounds
 - jimmy jam, teddy riley, etc etc
 - brian's favorite songs of all time** (highlighted in blue)
 - early 2010 brian listens to music
 - feb18
 - dd
 - XTC best
 - ben 3/17/09
- Playlist Section:** "Playlist" tab selected. A playlist titled "brian's favorite songs of all time" is shown.
- Library Section:** Shows a track table with columns: Track, Buy, Artist, Time, Album. Some visible tracks include:
 - Outdoor Miner (Wire) - 1:45
 - Palo Alto (Richard Davies) - 4:54
 - Love Will Never Do (Without You) (Janet Jackson) - 5:50
 - Shipbuilding – Remastered in 1998 (Robert Wyatt) - 3:08
 - Waterloo Sunset (The Kinks) - 3:14
 - The Chauffeur (Duran Duran) - 5:22
 - Grass Canons (The Olivia Tremor Control) - 3:21

Hardest problem?

- Evaluating distance metrics?
- Selecting audio features?
- Sharding / replicating key-value stores?
- Tuning, QA?
- Matching artist and track titles

The screenshot shows the Spotify premium interface with the search term "steely dan" entered in the search bar at the top. The results are displayed in three main sections: ARTISTS, ALBUMS, and SONGS.

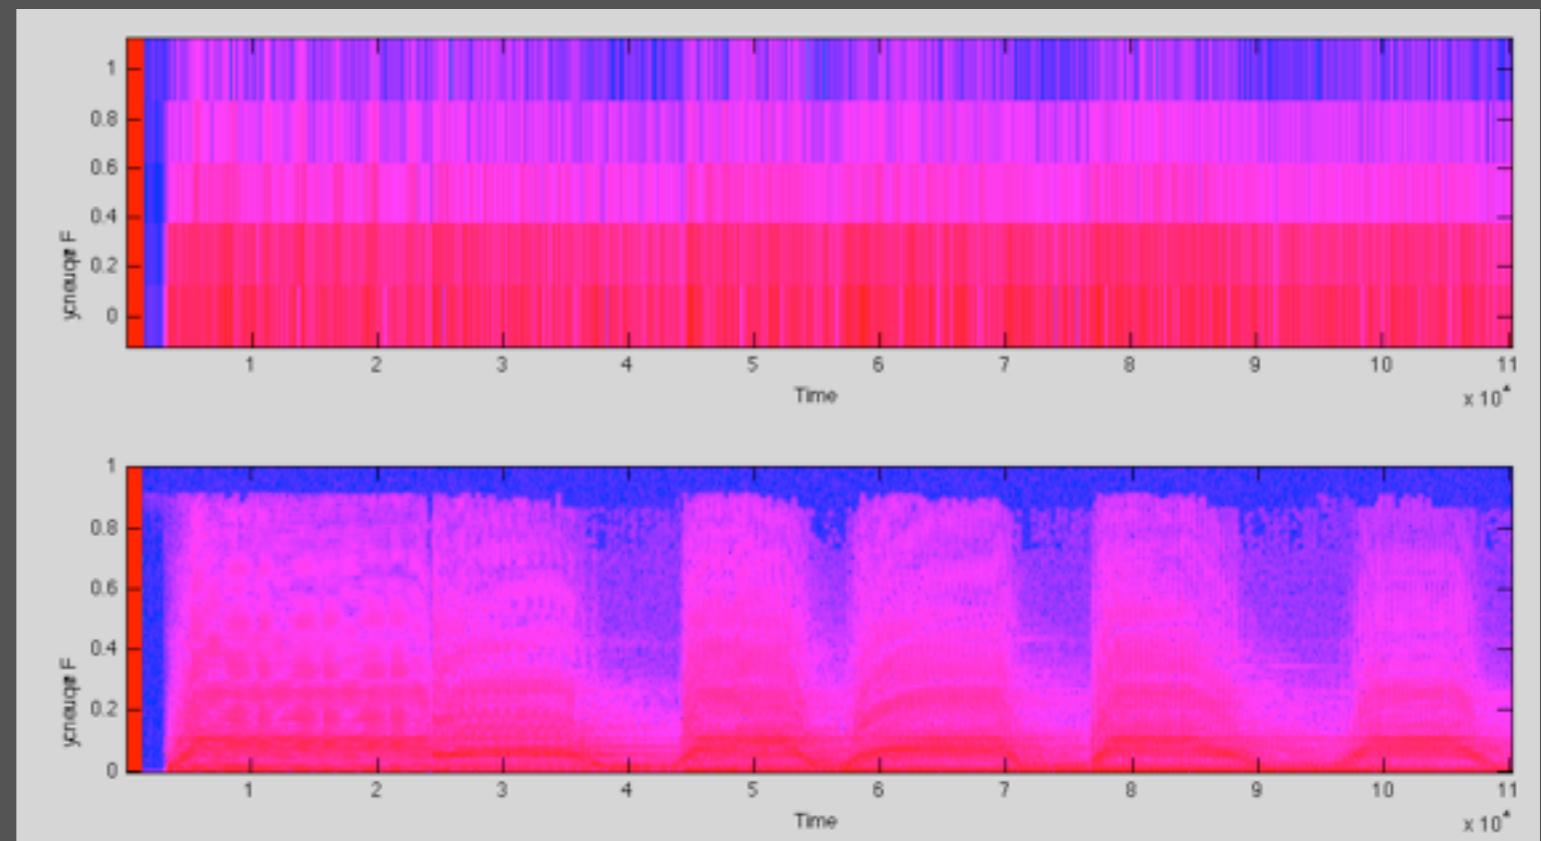

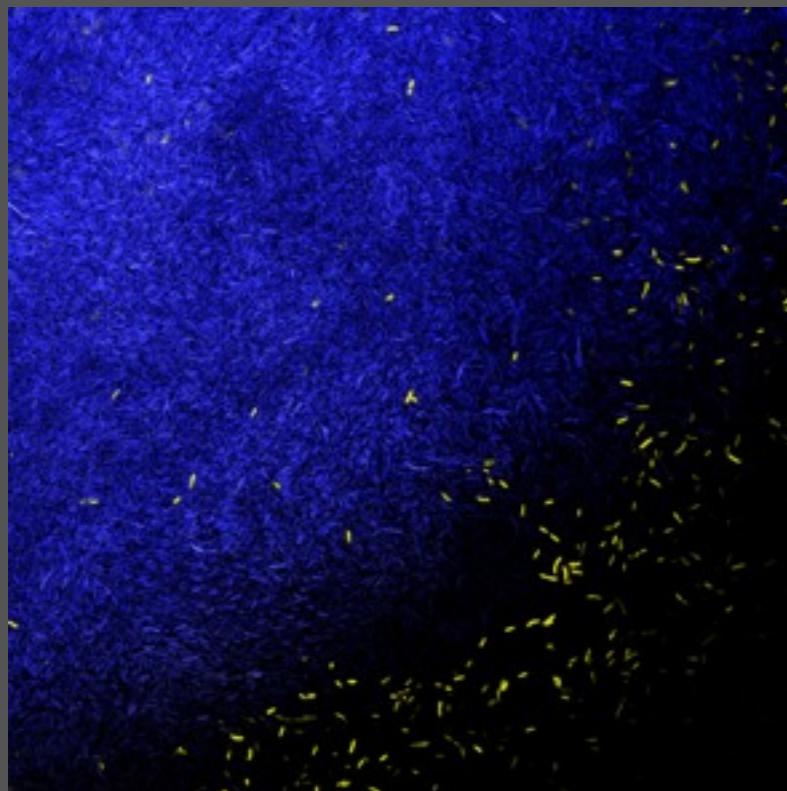

- ARTISTS:** Shows Steely Dan, Jeff "Skunk" Baxter (of Steely Dan), and Walter Becker and Donald Fagen (Founder Members Of Steely Dan).
- ALBUMS:** Shows albums by Steely Dan, including "Citizen 19" and "Katy Lied".
- SONGS:** Shows a list of songs from various artists, with "brian's favorite songs of all time" highlighted. The list includes:
 - premnu
 - instrumental
 - fast/instrumental
 - EN Holiday
 - ben
 - dr. ladysounds
 - jimmy jam. teddy riley, etc etc
 - brian's favorite songs of all time
 - early 2010 brian listens to music
 - feb18
 - dd
 - XTC best
 - ben 3/17/09

The right side of the screen shows a "Playlist" titled "brian's favorite songs of all time" containing the following tracks:

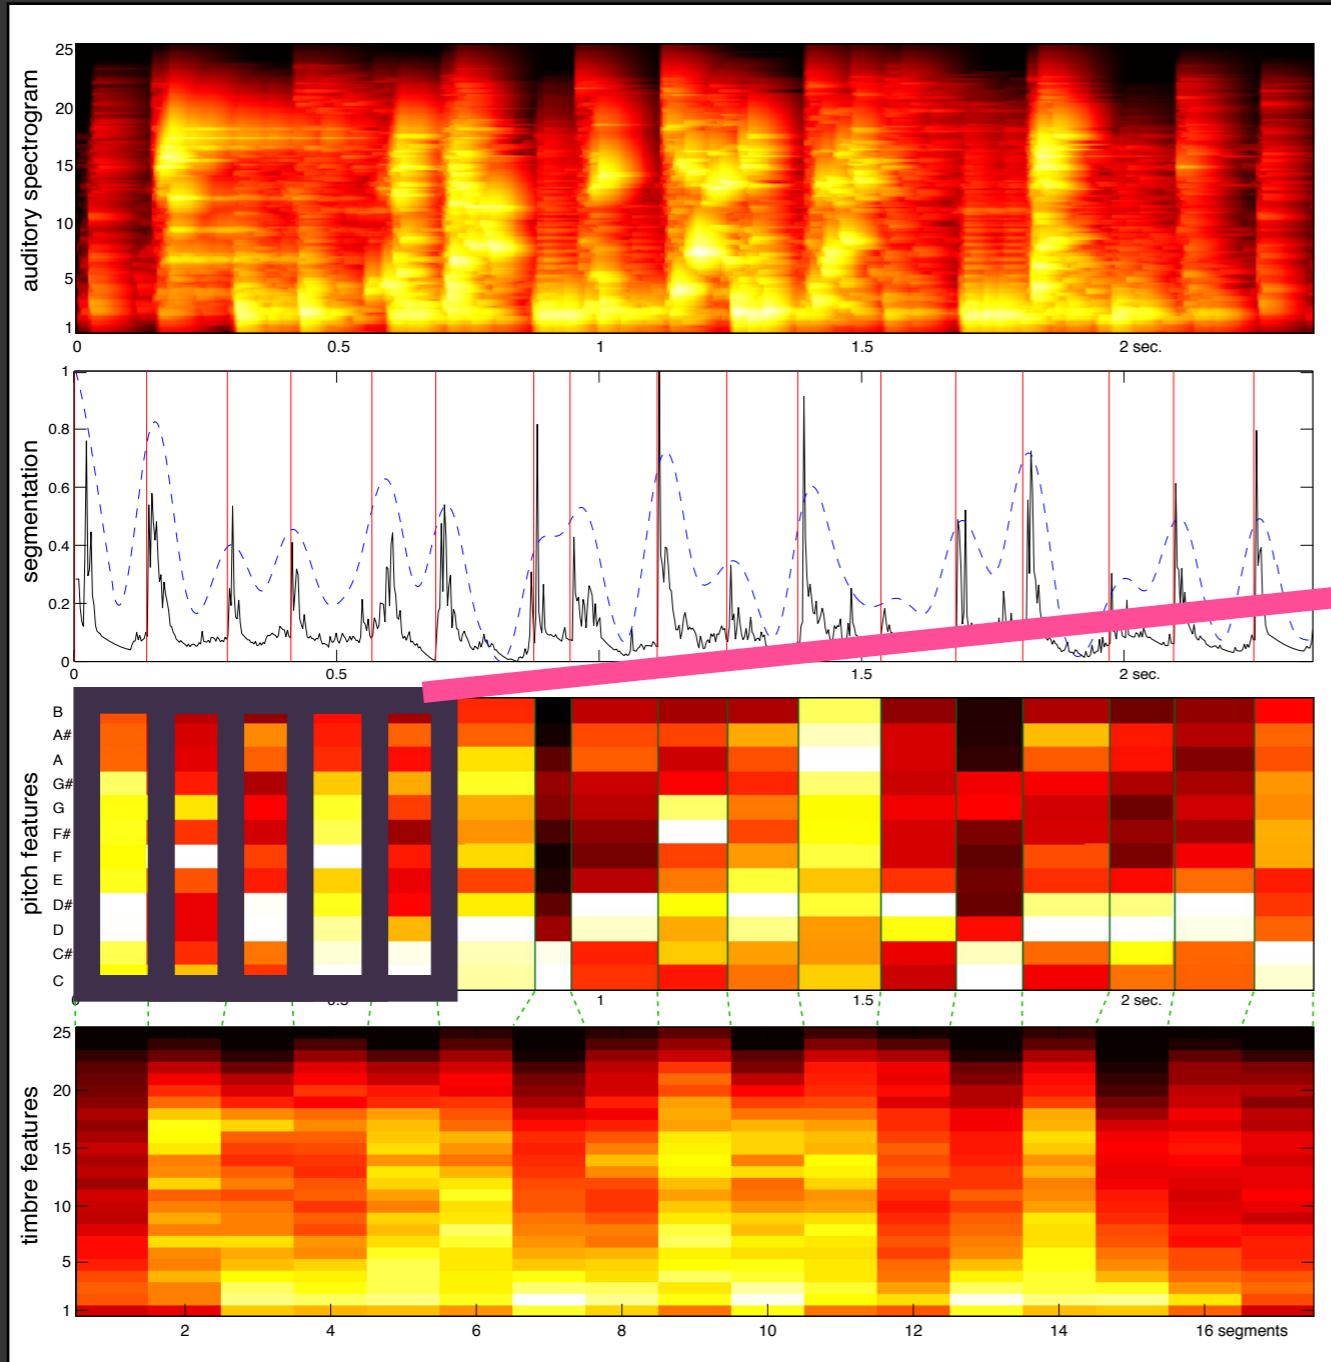

Track	Buy	Artist	Time	Album
Outdoor Miner		Wire	1:45	Chairs Missin
Palo Alto		Richard Davies	4:54	Barbarians
Love Will Never Do (Without You)		Janet Jackson	5:50	Rhythm Nation
Shipbuilding – Remastered in 1998		Robert Wyatt	3:08	EPs
Waterloo Sunset		The Kinks	3:14	The Singles C
The Chauffeur		Duran Duran	5:22	Rio
Grass Canons		The Olivia Tremor Control	3:21	Black Foliage

Echoprint & ENMFP

- Both massive LSH problems
- Different audio features >> n-bit codes >> DB

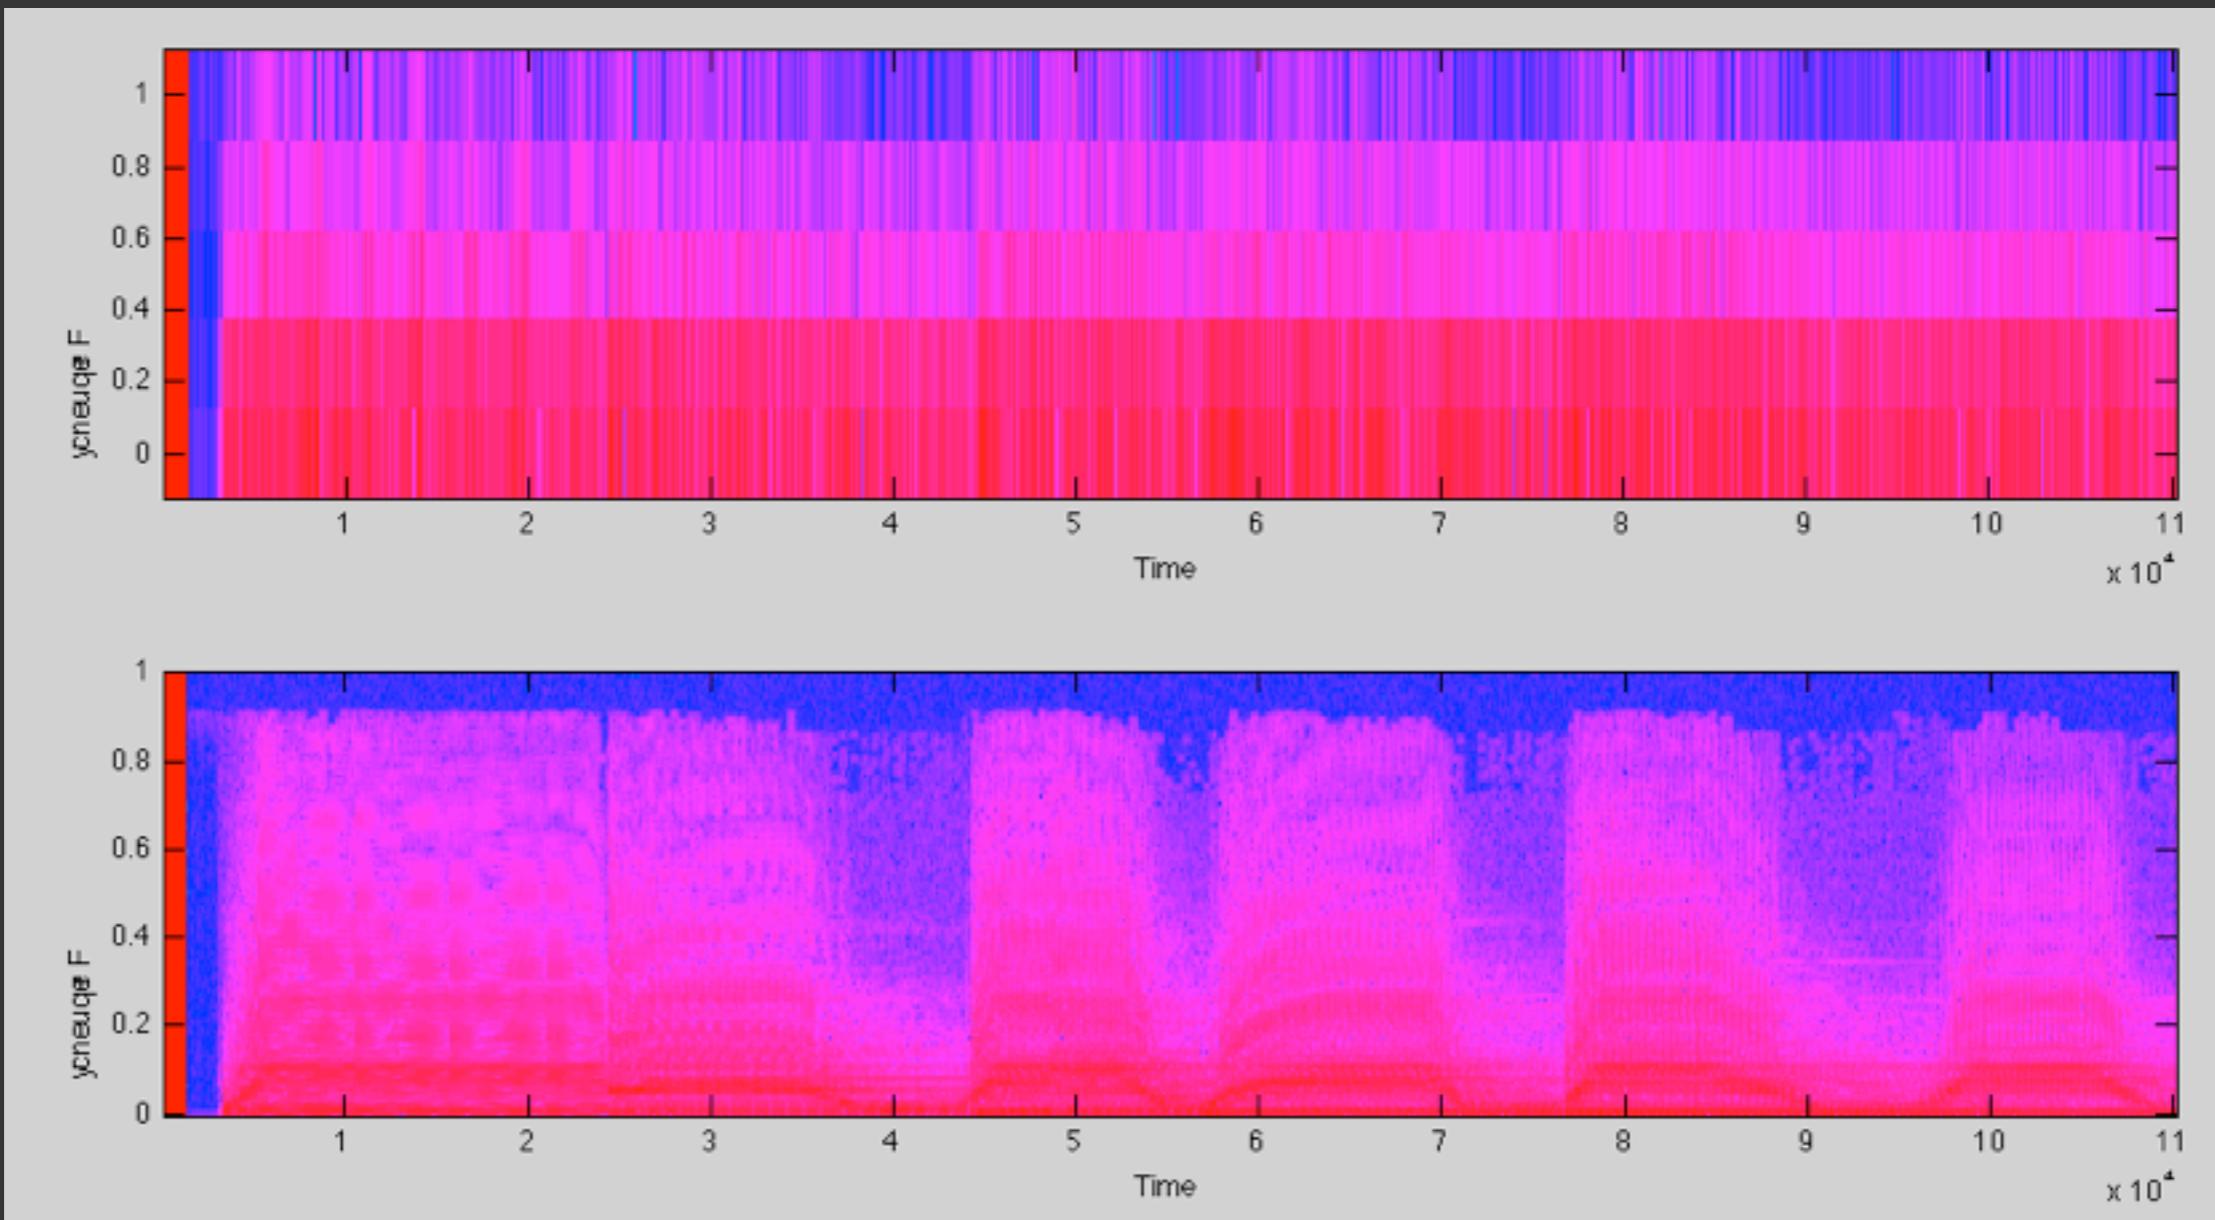

ENMFP

→ Chroma → VQ
10-bit # (0-1023)
3 in a row
| 30-bit # per seg

Echoprint

Whitened 8-band subband analysis
Onset detection
Each onset (time + mags) hashed to 20bit key

Server

All codes go into a big inverted index:

123984	6940	21823
TR5904 50ms	TR1283 1840ms	TR1293 680ms
TR1283 120ms	TR7348 860ms	TR5909 650ms

A query pulls out the top ranking TRs that have the most overlapping codes as the query. Does this fast. Time is used for ‘close matches’ (almost all of them)

Evaluation

Our FPs now have >75m tracks, serves hundreds of millions of queries a day

$$P(E) = \left(\frac{D}{D+N} \right) * R_r + \left(\frac{N}{D+N} \right) * R_a \quad (1)$$

where

$$R_r = \frac{fp + fn}{tp + fp + fn} \quad (2)$$

$$R_a = \frac{fa}{fa + tn} \quad (3)$$

We have published results² of various $P(E)$:

Manipulation	$P(E)$
30 second WAV file	0.0109
60 second WAV file	0.0030
60 second recompressed MP3 file	0.0136
30 second recompressed MP3 file	0.0163
30 second recompressed MP3 file at 96kbps	0.0260

Listener analytics

- Data from our crawlers and partners
- 100m -ish profiles
- Help artists find fans & etc

userID	likes “The Beatles”	smokes	gender	average song tempo	in friend cluster 393	WOEID	...
LI394AXT9	0.8	N	M	139.4			
LI484ART3					1.0	59403	
LI578TR4E	0.4	Y	F				
...							

↓ 100m users

→ 1m features

- $100m \times 1m$ matrix \mathbf{M}
- $< 1\%$ non-zero
- All operations must be iterative, parallel
- Dream:
 $[value, confidence] = prediction(listener, feature)$

userID	likes “The Beatles”	smokes	gender	average song tempo	in friend cluster 393	WOEID	...
LI394AXT9	0.8	N	M	139.4			
LI484ART3	[0.1, 0.9]	[N, 0.4]	[M, 0.9]	[83, 0.3]	1.0	59403	
LI578TR4E	0.4	Y	F				
...							

RLSC

$$K_f(x_1, x_2) = e^{-\frac{(|x_1 - x_2|)^2}{\sigma^2}}$$

$$(K + \frac{I}{2C})\mathbf{c} = \mathbf{y},$$

$$f(\mathbf{x}_{\text{test}}) = \mathbf{c} K(\mathbf{x}_{\text{test}}, \mathbf{x})$$

- (roughly) an SVM where all datapoints are SVs
- requires inversion of a kernel matrix of all obs
- **new classifiers are simple matrix mults through stored K^{-1} inversion: $\mathbf{c} = (K + (I/C))^{-1} * \mathbf{y}$**

But

- (1) wait, i can't compute a $100m^2$ kernel matrix
 - i mean, I can, but it'll take a while.
- (2) the inversion? Fast iterative SPD solvers?
- (3) data normalization:
 - 20% of features are probabilities
 - 20% are boolean
 - 30% are indexes
 - the rest are all over the place: tempo, key, term frequencies, age (!) etc

The power of APIs

What is MusicBrainz?

MusicBrainz is a community music metadatabase that attempts to create a comprehensive music information site. You can use the MusicBrainz data either by browsing this web site, or you can access the data from a client program — for example, a CD player program can use MusicBrainz to identify CDs and provide information about the CD, about the artist or about related information. You can also use the MusicBrainz Tagger to automatically identify and clean up the metadata tags in your digital music collections. Find out more in the [introduction](#).

Million Song Dataset

[Home](#) [Getting the dataset](#) [Code](#) [Tutorial](#) [Tasks / Demos](#) [Forum](#) [FAQ](#) [Contact us](#) [Blog](#)

[Home](#) » Home

Welcome!

The **Million Song Dataset** is a freely-available collection of audio features and metadata for a million contemporary popular music tracks.

Its purposes are:

- To encourage research on algorithms that scale to commercial sizes
- To provide a reference dataset for evaluating research
- As a shortcut alternative to creating a large dataset with The Echo Nest's API
- To help new researchers get started in the MIR field

The core of the dataset is the feature analysis and metadata for one million songs, provided by [The Echo Nest](#). The dataset does not include any audio, only the derived features. Note, however, that sample audio can be fetched from services like 7digital, using code we provide.

The Million Song Dataset is a collaboration between the [Columbia University LabROSA](#) and [The Echo Nest](#). It is supported in part by the NSE.

Hieroglyphics

The Oakland-based Hieroglyphics are an underground rap collective who, at their best, combine an offbeat sensibility with a strong grounding in battle rhyming, freestyling, and other hip-hop traditions. All the members enjoy ... [Read more »](#)

MUSIC HACKDAY

BOS

A FULL WEEKEND OF MUSIC HACKING. SOFTWARE + HARDWARE + ART + THE WEB. COME BUILD THE FUTURE OF MUSIC.

The main goal of Music Hack Day is to explore and build the next generation of music applications. It's a full weekend of hacking in which participants will come together to present their projects. Music + software + hardware + art + the web. And it's music related.

This event will mostly be spent hacking. Talks will be limited.

While we do plan to have some talks (and entertainment!), we're mostly interested in people who want to make stuff. That said, the demos and talks on Sunday afternoon are intended for a broader audience. See the preliminary [schedule](#) for details.

Join us for Music Hack Day Boston on November 21-22.
